Working assumptions, not forecasts. Capacity figures are scaled from a single Dutch reference case. Legal and regulatory entries were researched in September 2026, are not yet verified against primary sources, and will date. Generated 2026-09-05. How this was built.

Romania

Sovereign government data centre network — capacity, legal posture, provider landscape and migration path.

1 Starting point

Population	19.04 m
GDP	EUR 380 bn
Public administration (NACE O)	396 k
Electricity price	188.7 EUR/MWh
Renewables	47.6%
Live hyperscaler regions	0

2 What is structurally different

- Frontline exposure. A land border with Russia or Belarus (or a Black Sea coast facing the war) changes the threat model from *geopolitical supply disruption* to *kinetic and sabotage risk against the facilities themselves*. Defense and security workloads are scaled up 1.5x/1.25x in the baseline, and at least one site should be hardened (EMP/blast, autonomous power for weeks, not hours). A purely national footprint cannot provide the out-of-country cold copy that Estonia's Data Embassy already demonstrates; this is the first item to revisit when the EU federation layer (Dutch GOAL.md section 16) is modelled.
- High seismic risk. Base isolation or seismic-rated structures are mandatory, not optional, at the primary site; the second and third regions should be chosen in a different seismic domain so a single event cannot take out two regions. Expect facility CAPEX above the EUR 10 m/MW planning figure.
- No hyperscaler region in-country. Unlike the Netherlands, there is no commercial hyperscale tier to fall back on for non-critical workloads without leaving the jurisdiction. The sovereign core therefore has to be sized for a larger share of total government demand, and the hybrid model (Dutch GOAL.md section 7) needs a cross-border commercial tier.

3 Capacity

Servers	4,894 (CPU 3,438 / GPU 211 / storage 1,245)
IT critical load	7.9 MW
Facility design load	11.9 MW
Sites	4 (by capacity 1, floor 4)
Average per site	3.0 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 278 m
OPEX	EUR 29 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Bucharest	Primary civil cloud	36%	4.3	STS government cloud, InterLAN/RoNIX; highest-seismic-risk EU capital - base isolation required.
Cluj / Transylvania	Sovereign secondary	18%	2.1	IT cluster, outside the Vrancea zone, 400 km separation.
Timisoara / Banat	Government / continuity	18%	2.1	Western separation, Hungarian transit, low seismicity.
Brasov - Sibiu	Defense / industrial	18%	2.1	Existing STS regional DCs; mountain sites - verify Vrancea distance.
Craiova / Oltenia	Strategic reserve	10%	1.2	ClusterPower campus; away from the Ukraine/Moldova frontier.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	Law 242/2022 establishing the Government Cloud (Cloud Guvernamental), PNRR-funded and under construction
Cloud certification	No national scheme; ISO 27001
Data classification	Law 182/2002 on Classified Information: Secret de serviciu / Secret / Strict secret / Strict secret de importanta deosebita
Procurement route	Autoritatea pentru Digitalizarea Romaniei (ADR) and ONAC

Foreign jurisdiction exposure. No in-country region; the government cloud is intended to displace ad hoc ministry hosting

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	Cloud Privat Guvernamental - STS-operated, PNRR-funded (~EUR 560m package with SRI/ADR), 4 regional DCs (Bucharest, Timis, Brasov, Sibiu), national operational phase Mar 2026
Maturity	pilot
Digital identity	ROeID / electronic ID card (CEI)
Interconnection	InterLAN and RoNIX Bucharest; Black Sea KAFOS at Constanta

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	2.9	EUR 54 m	20%	no
2	Security and defense	5.9	EUR 143 m	71%	no
3	State record	1.7	EUR 44 m	87%	no

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
4	Elective	1.4	EUR 37 m	100%	no

Phase 1 is the number that matters: **EUR 54 m** for 2.9 MW, 20% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

Vrancea intermediate-depth seismic zone - Bucharest highest-risk EU capital (1977 M7.2); Danube/flash floods; borders Ukraine and Moldova with drone-debris incidents 2023-25; energy largely self-sufficient (gas, nuclear, hydro) but grid reinforcement lagging
