Working assumptions, not forecasts. Capacity figures are scaled from a single Dutch reference case. Legal and regulatory entries were researched in September 2026, are not yet verified against primary sources, and will date. Generated 2026-09-03. How this was built.

Czechia

Sovereign government data centre network — capacity, legal posture, provider landscape and migration path.

1 Starting point

Population	10.41 m
GDP	EUR 347 bn
Public administration (NACE O)	343 k
Electricity price	182.5 EUR/MWh
Renewables	17.9%
Live hyperscaler regions	0

2 What is structurally different

- No hyperscaler region in-country. Unlike the Netherlands, there is no commercial hyperscale tier to fall back on for non-critical workloads without leaving the jurisdiction. The sovereign core therefore has to be sized for a larger share of total government demand, and the hybrid model (Dutch GOAL.md section 7) needs a cross-border commercial tier.

3 Capacity

Servers	2,692 (CPU 1,883 / GPU 111 / storage 698)
IT critical load	4.3 MW
Facility design load	6.5 MW
Sites	3 (by capacity 1, floor 3)
Average per site	2.1 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 152 m
OPEX	EUR 15 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Prague - Central Bohemia	Primary civil cloud	41%	2.6	SPCSS/NAKIT estate, NIX.CZ; Vltava flood zoning applies.
Brno / South Moravia	Sovereign secondary	27%	1.7	Second metro, research cluster, 200 km separation.
Ostrava / Moravia-Silesia	Government / continuity	23%	1.4	Industrial grid; post-coal land availability.
Plzen / West Bohemia	Strategic reserve	10%	0.7	Western reserve, furthest from the eastern frontier.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	Act 365/2000 on Information Systems of Public Administration; eGovernment Cloud (eGC) catalogue is mandatory route
Cloud certification	NUKIB security requirements for the eGC catalogue; no separate cloud certificate
Data classification	Act 412/2005 on Protection of Classified Information: Restricted / Confidential / Secret / Top Secret
Procurement route	Ministry of the Interior eGC catalogue; commercial entries admitted only after NUKIB assessment

Foreign jurisdiction exposure. Microsoft Azure and AWS listed in the eGC commercial catalogue; no in-country hyperscaler region

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	eGovernment Cloud (eGC) under the Digital and Information Agency (DIA): state part operated by SPCSS (security level 4) + NAKIT; commercial catalogue (Azure OCI Google AWS)
Maturity	operational
Digital identity	Identita obcana (NIA) / eDoklady / BankID
Interconnection	NIX.CZ Prague; landlocked

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	1.8	EUR 34 m	22%	no
2	Security and defense	2.3	EUR 56 m	59%	no
3	State record	1.1	EUR 27 m	77%	no
4	Elective	1.3	EUR 35 m	100%	no

Phase 1 is the number that matters: **EUR 34 m** for 1.8 MW, 22% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

Low seismic; Vltava/Elbe/Morava floods (2024); central location with good land; nuclear baseload (new Dukovany units) but coal exit and gas import; NATO; ~300 km from Ukraine; Russian sabotage/espionage incidents 2024-25
