

Croatia

Sovereign government data centre network — capacity, legal posture, provider landscape and migration path.

1 Starting point

Population	3.87 m
GDP	EUR 93 bn
Public administration (NACE O)	110 k
Electricity price	154.8 EUR/MWh
Renewables	58.0%
Live hyperscaler regions	0

2 What is structurally different

- High seismic risk. Base isolation or seismic-rated structures are mandatory, not optional, at the primary site; the second and third regions should be chosen in a different seismic domain so a single event cannot take out two regions. Expect facility CAPEX above the EUR 10 m/MW planning figure.
- No hyperscaler region in-country. Unlike the Netherlands, there is no commercial hyperscale tier to fall back on for non-critical workloads without leaving the jurisdiction. The sovereign core therefore has to be sized for a larger share of total government demand, and the hybrid model (Dutch GOAL.md section 7) needs a cross-border commercial tier.

3 Capacity

Servers	930 (CPU 653 / GPU 37 / storage 240)
IT critical load	1.5 MW
Facility design load	2.2 MW
Sites	3 (by capacity 1, floor 3)
Average per site	0.7 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 52 m
OPEX	EUR 5 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Zagreb	Primary civil cloud	41%	0.9	CDU estate, CIX; 2020 earthquake makes seismic isolation mandatory.

Region	Role	Share	MW	Notes
Osijek / Slavonia	Sovereign secondary	27%	0.6	Flat land, lower seismicity; Sava/Drava flood zoning applies.
Split / Dalmatia	Government / continuity	23%	0.5	Coastal separation, Adriatic cable access; karst siting constraints.
Rijeka - Istria	Strategic reserve	10%	0.2	Krk LNG and port grid; reserve/expansion.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	Act on the State Information Infrastructure; central state cloud operated by APIS IT
Cloud certification	No national scheme; ISO 27001
Data classification	Data Secrecy Act: Restricted / Confidential / Secret / Top Secret
Procurement route	Central State Office for Digital Society Development (SDURDD)

Foreign jurisdiction exposure. No in-country region; Microsoft 365 in parts of administration via EU regions

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	Centar dijeljenih usluga (CDU / Shared Services Centre) state cloud - APIS IT for Ministry of Justice, Public Administration and Digital Transformation; two HA data centres; NRRP-funded
Maturity	operational
Digital identity	e-Gradani / NIAS + eOI eID card
Interconnection	CIX Zagreb; Dubrovnik (Adria-1) Adriatic links to Italy

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	0.6	EUR 12 m	24%	no
2	Security and defense	0.9	EUR 22 m	65%	no
3	State record	0.4	EUR 9 m	83%	no
4	Elective	0.3	EUR 9 m	100%	no

Phase 1 is the number that matters: **EUR 12 m** for 0.6 MW, 24% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

High seismic (2020 Zagreb M5.5, Petrinja M6.4); karst coast with limited flat land; Sava/Danube floods in Slavonia; ~30% electricity imports; Krk LNG terminal gives gas security; NATO
