

Slovenia

Sovereign government data centre network — capacity, legal posture, provider landscape and migration path.

1 Starting point

Population	2.13 m
GDP	EUR 71 bn
Public administration (NACE O)	51 k
Electricity price	150.3 EUR/MWh
Renewables	43.1%
Live hyperscaler regions	0

2 What is structurally different

- Moderate seismic risk. Seismic zoning should be a site-scoring criterion; at least two regions in different domains.
- No hyperscaler region in-country. Unlike the Netherlands, there is no commercial hyperscale tier to fall back on for non-critical workloads without leaving the jurisdiction. The sovereign core therefore has to be sized for a larger share of total government demand, and the hybrid model (Dutch GOAL.md section 7) needs a cross-border commercial tier.

3 Capacity

Servers	570 (CPU 390 / GPU 27 / storage 153)
IT critical load	0.9 MW
Facility design load	1.4 MW
Sites	3 (by capacity 1, floor 3)
Average per site	0.5 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 34 m
OPEX	EUR 3 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Ljubljana	Primary civil cloud	41%	0.6	DRO national DC, SIX; Ljubljana basin seismic zoning.
Maribor / Styria	Sovereign secondary	27%	0.4	EuroHPC Vega campus, 120 km separation, Drava hydro.
Koper - Nova Gorica / West	Government / continuity	23%	0.3	Italian transit and port grid; 2023 flood plains excluded.

Region	Role	Share	MW	Notes
Celje / Savinja	Strategic reserve	10%	0.1	Central reserve; flood-plain siting must be excluded.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	State cloud (Drzavni racunalniski oblak, DRO) under the Ministry of Digital Transformation
Cloud certification	No national scheme; ISO 27001
Data classification	Classified Information Act: Interno / Zaupno / Tajno / Strogo tajno
Procurement route	Ministry of Public Administration central procurement

Foreign jurisdiction exposure. No in-country region; limited Microsoft use via EU regions

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	Drzavni racunalniski oblak (DRO) - Ministry of Digital Transformation state cloud in the national government DC (Ljubljana) + DR site; EuroHPC Vega (Maribor)
Maturity	operational
Digital identity	SI-PASS / smsPASS / eOsebna eID card
Interconnection	SIX (ARNES) Ljubljana; no major landing (Koper)

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	0.3	EUR 6 m	19%	no
2	Security and defense	0.6	EUR 14 m	60%	no
3	State record	0.2	EUR 6 m	78%	no
4	Elective	0.3	EUR 7 m	100%	no

Phase 1 is the number that matters: **EUR 6 m** for 0.3 MW, 19% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

Moderate seismic (Ljubljana basin; Bovec 1998/2004); catastrophic Aug 2023 floods (Savinja/Sava); mountainous with limited flat land; Krsko NPP shared with Croatia; low geopolitical risk
